Philosophy of the GNU Project

[Catalan | English | Hungarian | Italian | Japanese | Portuguese | Russian | Spanish | Turkish]

Table of Contents

- About Free Software
- About the GNU Project
- Licensing Free Software
- Laws
- Terminology and Definitions
- GIFs
- Motivation
- Speeches
- Third Party Ideas
- Translations of these documents

We also keep a list of Organizations that Work for Freedom in Computer Development and Electronic Communications.

About Free Software

Free software is a matter of freedom: people should be free to use software in all the ways that are socially useful. Software differs from material objects--such as chairs, sandwiches, and gasoline--in that it can be copied and changed much more easily. These possibilities make software as useful as it is; we believe software users should be able to make use of them.

- What is Free Software? (French translation)
- Why Software Should Not Have Owners
- Why Software Should Be Free. (This is an older and longer essay about the same topic as the previous one.)
- Why Free Software Needs Free Documentation.
- Selling Free Software Can Be OK!
- Categories of Free and Non-Free Software (18k characters)
- Free software is more reliable!

About the GNU Project

- Initial announcement of the GNU Project
- The GNU Manifesto (31k characters)
- Brief history of the GNU Project
- The GNU Project, a longer and more complete description of the project and its history.
- What is the Free Software Foundation?

Licensing Free Software

- Free Software Licenses
- What is Copyleft?
- Why you should not use the Library GPL for your next library..
- Copyleft: Pragmatic Idealism
- The X Windows Trap
- The Problems of the Apple License
- The BSD License Problem
- The Netscape Public License has serious problems.
- The Free Software Movement and UDI
- Is Microsoft the Great Satan? (French translation)
- The Microsoft Antitrust Trial and Free Software
- On the Microsoft Verdict

Legal Education Day

FSFE Legal Education Day – 6 Nov 2021

fsfe

All times CET	6 Nov 2021 (Saturday)
12:00 – 12:05	**Welcome and Introduction**
12:05 – 12:20	Quiz Time – How much do you know about Free Software legal issues? FSFE • A quiz to gauge the audience's level of knowledge, and to break the ice
12:20 – 12:40	What is Free Software? Lina Ceballos • Introduction to Free Software, correcting misconceptions, and highlighting its importance in society
12:40 – 13:00	Free Software and Human Rights Gabriel Ku Wei Bin • Explanation of how Free Software interacts with human rights law and enables society to enjoy rights
13:00 – 13:15	What is Copyright? Niharika Singal • Basic breakdown of copyright law and how it applies to software development.
13:15 – 13:30	*Break*
13:30 – 13:50	What is a License? Lucas Lasota • Explanation of licenses, their legal obligations, and the consequences of not following these obligations.
13:50 – 14:30	Commonly Use Free Software Licenses – License Compatibility and License Integration Lucas Lasota / Gabriel Ku Wei Bin • Breakdown of the most commonly used Free Software licenses and the obligations therein. • Explanation of license compatibility/incompatibility
14:30 – 15:10	REUSE – Common Problems in your Repository and How To Make Your Repo REUSE Compliant Lina Ceballos / Max Mehl • Explanation of REUSE and tutorial on the basic steps to make a repo REUSE Compliant
15:10 – 15:30	*Q&A*
15:30 – 16:00	*Break*
16:00 – 16:15	What is a Trademark? Gabriel Ku Wei Bin • Explanation of trademarks and use of logos in software projects
16:15 – 16:45	Containers Scott Peterson • Explanation of how Containers change Software Distribution
16:45 – 17:15	Free Software and Legal Issues around Fediverse Rebecca Sieber - GNU Humboldt University • An overview of legal obligations and pitfalls when operating a Fediverse instance
17:15	**Closing Remarks**

"Regarding REUSE, we have learnt a lot. We realise that the idea behind REUSE is simple, clear, and powerful… Nowadays, Free Software projects become more and more complicated, and many components/files of a single project have different license/copyright information. REUSE helps a lot on tracking the status of this information in our project."

– Xianjun Jiao, OpenWifi Project

EU Datathon Winner: TEDective

Federated communication for public authorities

Communicate confidently and respectfully with the public

Take Action

Fedi... What?!

Public institutions (government agencies, broadcasters, educational institutions) predominantly use proprietary platforms like Twitter, Facebook, Instagram, and YouTube. The companies behind them have a lot of influence on who communicates on their platforms and how. Furthermore, through prominent linking and use of the services, public institutions advertise them and get the public to use them.

We want to convince public authorities to rethink their use of social media. This is possible with the gradual transition to federated free software solutions.

fsfe

fsfe

Why Router Freedom?

Upgrade your router

Increase the speed and coverage of your router. Make it compatible with your devices. Configure, improve, and repair your router. Its performance should be up to you.

Avoid a router monopoly

If you can only use the equipment provided by a single company, your possibilities might be less secure or user-friendly. And you will have no alternative. Get the most out of the innovations in the router market.

Secure your connection

Routers transmit personal data. Some terminal equipment offers greater privacy than others. Determine for yourself the level of security you want.

Choose your own router

The device given by your internet service provider should not be the only possibility.

How does phone production affect the environment?

Producing one new device takes as much energy as using your phone for four years.

50 million
tons of electronic waste are produced annually.

1.5 billion
phones are sold every year.

If only one in three of us would use their device one year longer, we could save the resources of producing hundreds of million of phones annually.

Often, when the software lags, hardware remains in good condition. So why toss away your expensive hardware? You can upcycle your phone with Free Software.

Renew and keep using your phone with Free Software!
Your operating system can be replaced. Install a Free Software one, usually referred to as a "custom ROM".

Enjoy more benefits.
Take control: uninstall any app you want, remove trackers, have transparency of your software, and your device runs smoothly with Free Software.

UPCYCLING Android

Learn more about the benefits of using Free Software and extending your hardware lifetime on **www.upcyclingandroid.org.**

DEVICE NEUTRALITY

Let the device diversity flow with Free Software

Our devices are all-purpose computers. *Free Software* allows the full use of the hardware.

Safeguarding Free Software alternatives to operating systems, drivers, app stores, browsers and other software is crucial for *freedom of choice* and a *healthy, competitive, democratic, diverse* and *sustainable* digital society.

It is time to reclaim software freedom with Device Neutrality!

fsfe

DEVICE NEUTRALITY

Device Neutrality helps to break up digital monopolies and restore competition by giving back the end user the control of their devices. This balance of power is achieved through these demands:

Ensuring software freedom

End-users should be able to install and uninstall any software, including operating systems, browsers and app stores. Free Software should have the same access rights on devices as the pre-installed ones.

Breaking lock-ins

Gatekeepers should not dictate how we use our devices. They should not discriminate against Free Software. Device Neutrality means interoperability, widespread adoption of Open Standards, easy access to APIs specifications and functionalities invoked by Free Software.

Empowering end-user control over data

Data empowerment is paramount. Smartphones, smartwatches, and computers are very personal machines that accumulate large amounts of sensitive personal and non-personal data. That's why end-users should be able to easily transfer personal data from apps, operating systems, and devices.

Learn more about Device Neutrality and Free Software
